Questions with Answers - Adobe Acrobat Files

Sometimes while using the Internet, you may discover a page which you will want to refer to again. One option is to bookmark the page, but then if you want to refer to it again, you better be online. So, you may want to print the page, instead. Of course, you can always print any page you currently are viewing on the Internet by hitting the print button at the top of your browser screen. However, you may only be interested in the text and any graphics related to that text, and not necessarily interested in all the web-related page headers, footers, blank spaces and other graphics which are on the screen, and so will also appear on your print out. All that extra web-related stuff can not only clutter up your printout, but it wastes paper, too. By offering Adobe Acrobat PDF files, the IDEM Permit Guide, and other IDEM-related sites allow you to conveniently print out concise copies of web-based information and other documents, or to save those same (clutter-free) documents on your personal computer hard drive for later use.

What is Acrobat PDF?
Acrobat is the name for a family of software products from Adobe Systems, Inc. The idea is that any document in PDF format, when viewed on-screen, represents the exact appearance of the document if you were to print it on your computer's printer. Unlike printing from webpages, a printed PDF file appears exactly as it does on your monitor, without wasted space, incorrect or enlarged fonts, and the graphic symbols that appear in webpages. PDF files can be viewed and printed by anyone with the freely available Adobe Acrobat Reader software. When compared with printing out webpages, PDF files usually use less paper and the printouts are more consistent, readable, and polished in appearance. PDF files may also be saved to your computer's hard drive for future reference.

Elsewhere on the IDEM website, you may run across permit application forms and instructions that are available in Acrobat PDF format. Some of the newer forms take advantage of Acrobat's fill-in capability, so permit applicants can enter text into form fields, print the document out, and mail it to IDEM.

What software do I need to view Acrobat PDF files?
To view and print Adobe Acrobat PDF files, you need to have Adobe Acrobat Reader software installed on your computer. The latest version of Adobe Acrobat Reader can be downloaded for free from the Adobe Acrobat Reader Download Page. The free Adobe Acrobat Reader also allows you to save any PDF document to your hard drive, though any information you enter into form fields on some of IDEM's new permit applications is not saved along with the rest of the document unless you purchase the full Adobe Acrobat software package.
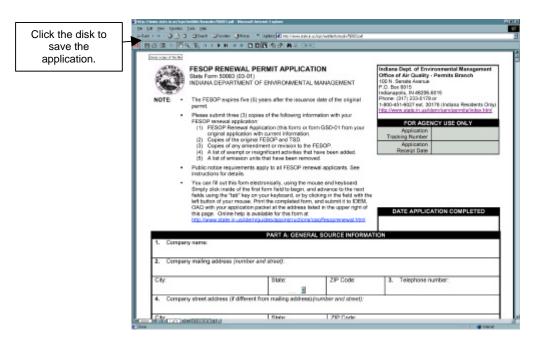

How do I download PDF Files?
If you have the Adobe Acrobat Reader software installed on your computer (available from http://www.adobe.com/products/acrobat/readstep2.html), you can click on the link to any PDF file,

and view (or print) the PDF document as it appears in your browser. However, when you move to another link or click "back" to go to the previous page visited, you can no longer view the PDF file, as your browser window's content will be replaced with that of the page you have navigated to. If you would like to retain an electronic version of the PDF document on your computer, it's easy to save the file to your hard drive so that it may be viewed or printed directly from the Adobe Acrobat Reader software at any time, regardless of whether or not you are connected to the Internet.

One way to download PDF documents is to simply click on the link to the document.   If you have Adobe Acrobat Reader or other Adobe Acrobat software installed on your computer, the file will soon open in your web-browser. Save the document to your hard-drive by clicking on the small disk icon that appears at the upper-left hand side of the frame surrounding the PDF document, and, using the dialog box that appears, navigating to the desired location on your hard drive to place the PDF file for future use and clicking on *"save."* Alternately, you can click on *"File"/"Save"* from the menu-bar at the top of your browser window.

Another method (for PC users only) is to right-click on the link to the PDF file, and, in the menu that appears, select *"Save Target As…"* (for Internet Explorer) or *"Save Link As…"* (for Netscape Navigator/Communicator).

Click the disk to save the application.

Additional Questions

Why is some of the text in the Permit Guide PDF files colored blue?
The blue text represents hyperlinks that exist in the online (HTML) version of each document. If you are interested in viewing the linked information, simply visit the online version of the Permit Guide page from which the link originates, and click on the corresponding link from within your web-browser.

Are the PDF versions of Permit Guide pages identical in content to the HTML versions?
Yes, in content, the HTML and PDF versions of Permit Guide pages are identical and are always updated simultaneously to reflect changes in environmental rules and statutes. However, unlike the Permit Guide web-pages, the PDF versions do not contain hyperlinks to obtain any additional information through the Internet on the given topic. The PDF files are primarily intended to

provide "printer-friendly" versions of the HTML pages they complement. On the other hand, the online (HTML) web-pages that make up the Permit Guide, are far more interactive and efficient for use in obtaining information on a topic, as they link to additional information sources and other Permit Guide pages covering topics relevant to the permitting topic that you are interested in.
